

Payments — live test script

AtFactoryPrice ops bot · PAY-1 · one small real payment, end to end

Abdul

asks to be paid

Two admins

approve, on their own phones

Office phone

pays at the bank, marks it done

Before you start

1. Everyone opens the bot and types hi — that is what shows the menu.
2. Abdul, the two admins and the Office phone should each have the bot open.
3. Use a SMALL real amount you are willing to actually send. This test really pays money.
4. Tick each box only when what you SAW matches what the sheet says must happen.

Part 1 — Abdul registers his bank account

Done once. Nothing can be paid to an account that has not been through this.

ABDUL

1. Type hi, then open Payments (it may sit under Finance).

MUST HAPPEN · It says he has no registered account yet.

☐

ABDUL

2. Tap Register account. Type his 10-digit account number.

MUST HAPPEN · The bot asks for the same number a SECOND time.

☐

ABDUL

3. On purpose, type a WRONG number the second time (change one digit).

THIS IS THE BIG ONE · The bot says the two did not match and starts the number over. Nothing is saved.

☐

ABDUL

4. Now type the correct number twice, pick his bank, tap Submit.

MUST HAPPEN · It says Sent for approval.

☐

2 ADMINS

5. Both admins open the approval and approve it.

MUST HAPPEN · Abdul is told it is approved. In the PaymentAccounts sheet the row turns 'active' and the account number still shows its leading zero.

☐

Part 2 — Abdul asks to be paid

ABDUL

6. Payments, then Request payment.

MUST HAPPEN · He sees ONLY his own account. No colleague's account appears anywhere.

☐

ABDUL

7. Pick the account, type 45000 , tap Skip - no bill, then Submit.

MUST HAPPEN · The confirm screen shows ₦45,000 with NO 'large payment' warning.

☐

2 ADMINS

8. Both admins approve the payment request.

MUST HAPPEN · The Office phone receives a payment card showing the name, account, bank, ₦45,000, who approved it, and two buttons: Mark Done and Decline.

☐

Part 3 — Only the Office phone can pay

This is the rule that protects the money: one hand pays, and only that hand.

2 ADMINS	9. From an ADMIN phone (not the Office phone), tap Mark Done on that card. THIS IS THE BIG ONE • It refuses: 'Only the finance person marks a payment done.' Nothing changes.	☐
OFFICE PHONE	10. Make the real transfer at the bank. Then tap Mark Done. MUST HAPPEN • Abdul gets a message: Paid. The sheet shows 'done', who did it, and when.	☐
OFFICE PHONE	11. Tap Mark Done on the same card once more. THIS IS THE BIG ONE • It refuses: 'Already marked done.' The money cannot be sent twice.	☐

Part 4 — The large-payment mark, and refusing a payment

ABDUL	12. Raise a second request, this time for 50000 . MUST HAPPEN • A 'large payment' warning now shows — it appears at ₦50,000 and above.	☐
2 ADMINS	13. Both admins approve it so it reaches the Office phone. MUST HAPPEN • The card arrives carrying the large-payment warning.	☐
OFFICE PHONE	14. Tap Decline. Type just the word no . MUST HAPPEN • It refuses and asks for a real reason.	☐
OFFICE PHONE	15. Now type a proper reason, e.g. Account name does not match the invoice. MUST HAPPEN • Abdul receives the refusal WITH that reason. No money moves.	☐
ABDUL	16. Open Payments, then My requests. MUST HAPPEN • He sees ₦45,000 - paid, and ₦50,000 - declined by finance.	☐

If something goes wrong

Stop at that step and write down the step number and exactly what the bot said.

If the payment card in step 8 goes to ALL the admins instead of only the Office phone, the card itself will print a line explaining why — photograph that line and send it.

Nothing in this test can lose money on its own: the bot never moves money by itself.

Tested by
