🚚 Sending bales to another store

How to raise a transfer request in the bot, with the bale numbers you want sent.

For office staff. Anyone with bot access can raise one. Example used throughout: 3 bales of 9006 · Shade 3 from Lagos to Kano office, numbers 869, 843 and 874. Abdul sends, Musa receives.

THE ONE RULE

You type the bale numbers. The bot never chooses bales for you.

Your numbers are shown to Abdul as 📌 **Ordered** when he packs the load. If one of your bales is gone, the card tells you, and a person decides what replaces it.

Two ways to do it

A · Type one line — `Transfer 869, 843, 874 to Kano office`. Fastest when you have the numbers. The bot reads this line itself.

B · Tap through — 🔁 Move Stock → 🚚 Transfer Stock → store → design → shade → how many → where to.

Before you start

- Have the bale numbers ready.
- All bales of one request must be in the same store. Two stores = two requests.
- Store names as the bot spells them: Lagos, IDUMOTA, Kano office.

What happens after you send

🔴 Sent by you → 🚚 Packed Abdul ticks bales + photo → 🛂 Admin checks it → 🟡 On the road → 📦 Arrived Musa reports + photo → 🟢 Done admin confirms

Where is it? Any time

🔁 Move Stock → 📋 Transfers lists every open transfer: who it is waiting on and for how long. Tap a row to open it.

The request number is the date · number of the day, here **31Oct·01**. Use it when you ask about a transfer.

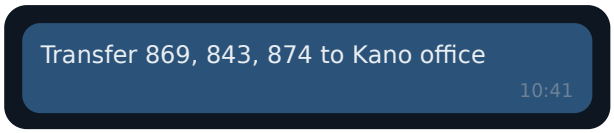

Way A — type the bale numbers

One message: the word **Transfer**, the bale numbers, then **to** and the store.

1 Type the line

Transfer (or **Move**) must be the first word. Separate the numbers with commas or spaces. The words *package* / *bale* are optional. Up to 50 numbers.

> Do not type the store the bales are in — the bot knows. If some of the numbers sit in another store, the card lists them with *start a separate transfer*.

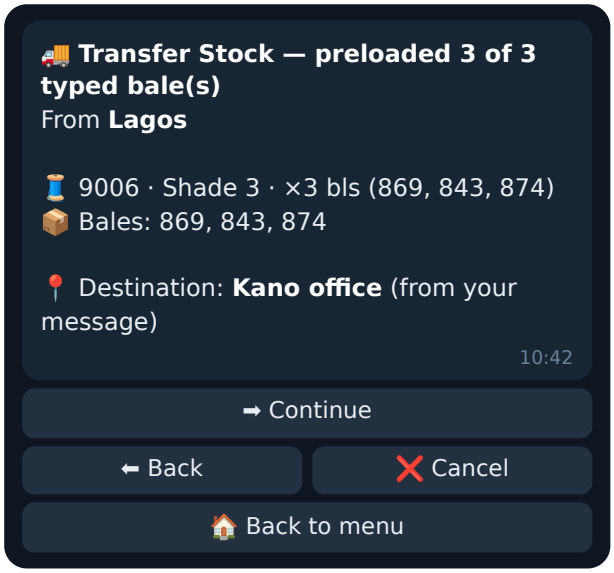

also fine: `Move 869 843 874 to Kano` · `Transfer package 5801 to Kano` · `Transfer packages 5801, 5802, 5803 to Kano`

2 Check the card

The bot shows what it found, grouped by design and shade. A bale it could not find is listed with the reason: sold, on the road, in another store, or not on record.

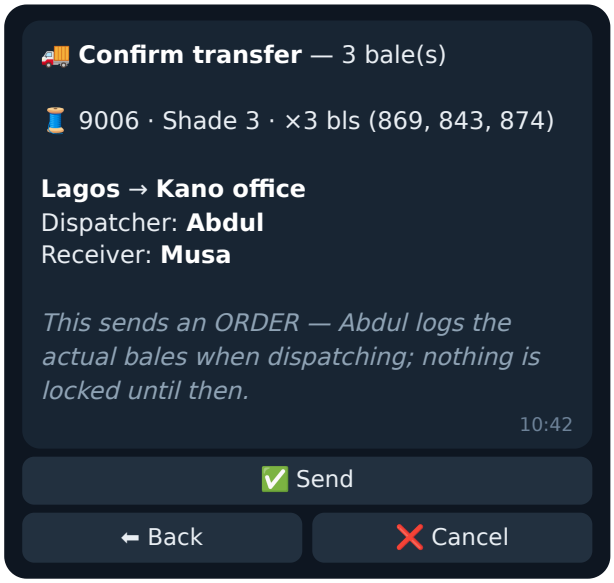

> If the bot recognised your store name the button says ➡ **Continue**. Otherwise it says ➡ **Pick destination** and asks where to.

3 Send

Abdul (sends) and Musa (receives) are filled in for you when each store has one person; otherwise you pick from a list. Tap ✅ **Send**.

> Nothing moves yet. The bales stay in the store until Abdul packs the load.

Way B — tap through

Use it when you know the design and shade but not the bale numbers. Abdul picks the bales when he packs.

🏠 Menu › 🔁 Move Stock › 🚚 Transfer Stock

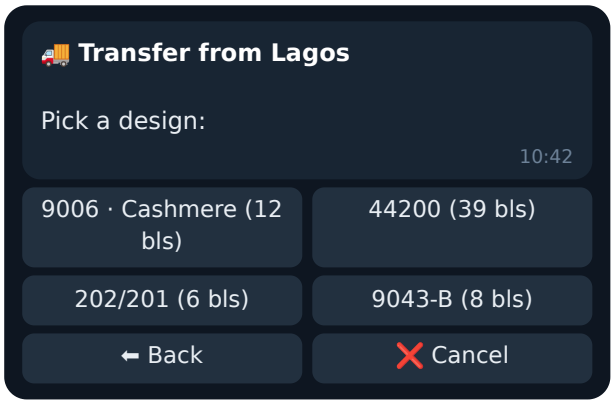

1 Which store are the bales in?

Only stores that hold stock are shown.

2 Pick the design, then the shade

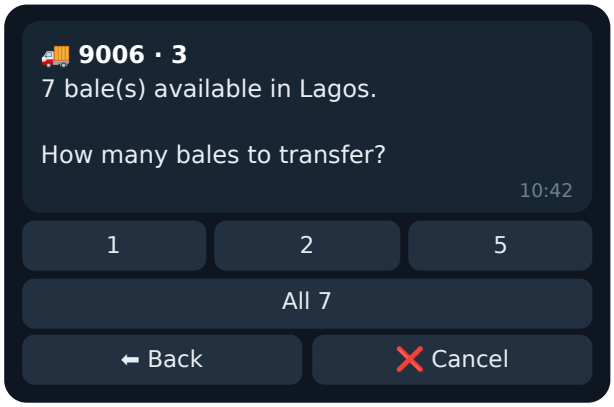

The number in brackets is how many bales are there.

3 How many bales?

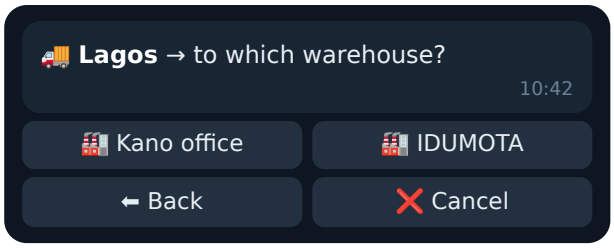

Tap a number, or **All**.

4 Which store receives them?

Then the same ✅ Send card as Way A appears.

> Way A is better when you have the numbers: Abdul then sees exactly which bales you want.

After you send

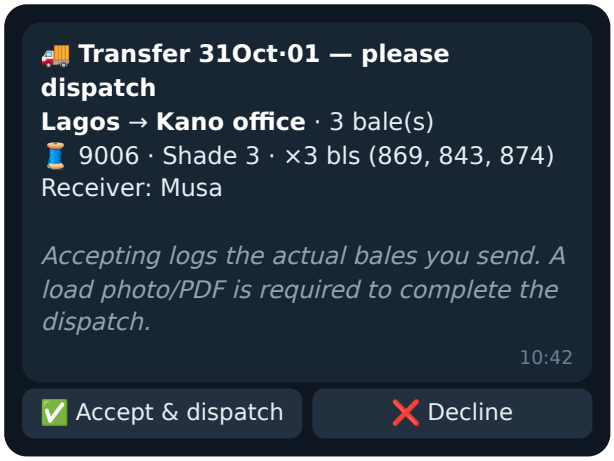

1 Your copy

Your confirm card becomes this receipt, with the request number **31Oct·01**.

2 Abdul's card

He ticks the bales he actually packs — your numbers shown as 📌 Ordered — and attaches a photo of the load. Without the photo nothing moves.

Quick answers

- **A bale is missing from the card** — read the reason next to it. Fix the number, or raise a second request for the other store.
- **Abdul packed different bales** — allowed. What he packs is what moves.
- **Only some bales arrived** — Musa ticks the ones that came. The rest stay on the road until they arrive.
- **I want to cancel** — there is no cancel button after Send. Ask Abdul to tap ❌ Decline.
- **The bot says "This load is already open"** — the same request already exists. Open that one instead of sending again.
- **The bot says "I work with the chips, not sentences"** — your line did not start with Transfer / Move, or had no number. Retype it: **Transfer 832, 1186, 786 to kano**, or tap 🏠 Menu on that card.
