

Shade Photos

How to send the garment picture for every shade

For: **Abdul** · Telegram: **Black Panther_Bot** · About 5 minutes for 5 colours

THE ONE RULE

Send every picture as a FILE, not as a photo.

 → **File** → **pick the picture** → **Send**

If you send it the normal way (as a photo), Telegram makes it small and blurry before the bot ever sees it. The customer then sees a poor picture. As a **File**, the picture stays exactly as it was taken.

What you are doing

Every design has a shade book — the page with the numbered colour tabs. For **each** colour tab you send **one picture of the finished garment** sewn in that colour.

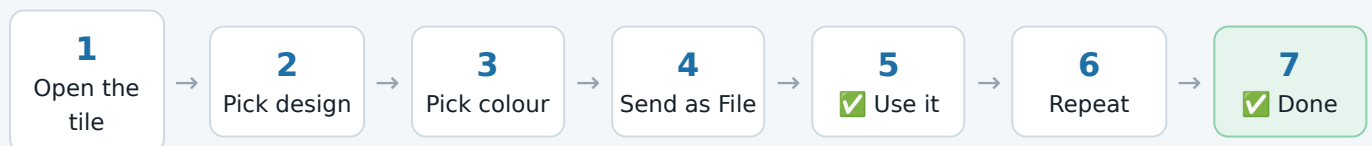

After the admin approves, anyone who taps that colour in the bot sees your picture instead of the shade book.

Before you start

- The **design number** (example: 202/201)
- **One picture per colour**, already on your phone
- Know which picture is which colour number

Finish one design in one sitting. The  pictures are only held in the bot's memory until you tap  **Done** — if you leave it 30 minutes, or tap  Cancel, they are gone and you start that design again.

The whole job in 7 steps

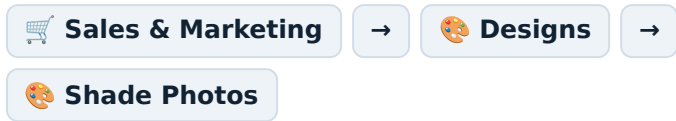

Every screen in this guide is exactly what the bot shows. Guide version 02-Sep-2026.

Step 1 - 2 · Open the tile and pick the design

1 Open 🎨 Shade Photos

Say **Hi** to the bot, then tap through the menu:

A design with a ✓ already has some shade pictures. You can still add the missing colours.

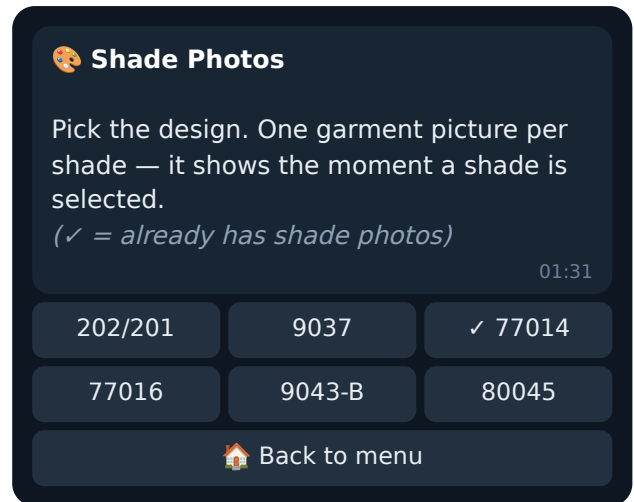

No 🛒 Sales & Marketing button? Look under **More Options** — the menu only shows what your department is allowed.
Still no 🎨 Shade Photos? Tell the admin to add **shade_photos** to your department. You cannot fix that from the phone.

2 Tap the design number

Tap the design you are working on — here **202/201**.

The bot goes straight to the colour list.

If the design has photos for **more than one container**, the bot asks which one first. The buttons read 📦 with the container name. Pick the container you were told. 🌐 **Generic (all containers)** appears only if some photos were filed without a container — if you are unsure, ask the admin rather than guessing.

Step 3 - 4 · Pick the colour and send the picture

3 Tap a colour

Tap the colour you have a picture for — here **1 - White**.

Or tap  **Add next missing** and the bot chooses the next colour with no picture for you.

If that colour already has a picture, the card says so — your new one replaces it after approval.

4 Send it as a FILE

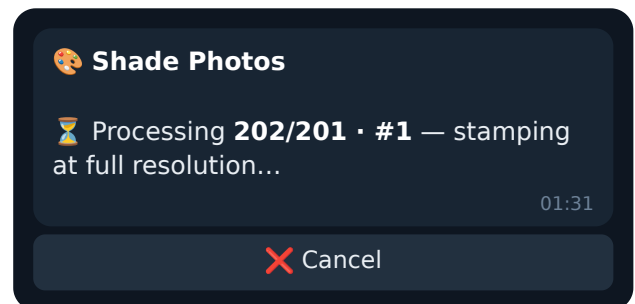

In Telegram: tap  (paperclip) → **File** → choose the picture → Send.

The bot shows this while it works — a few seconds:

Do **not** use the Gallery / Photo button. That is the compressed way.

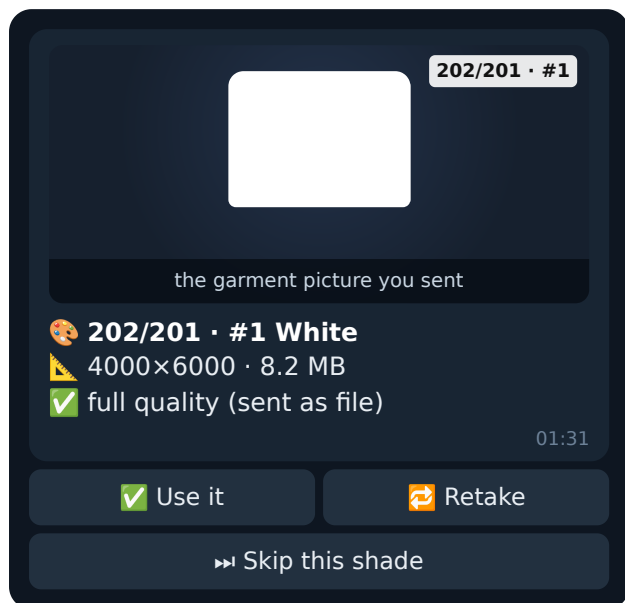

Send **one picture at a time** — and only when the bot asks for one.

Step 5 · Check the preview — this is where quality is won or lost

The bot sends the picture back with the design and colour number stamped on it. **Read the third line.** It tells you whether the quality was kept.

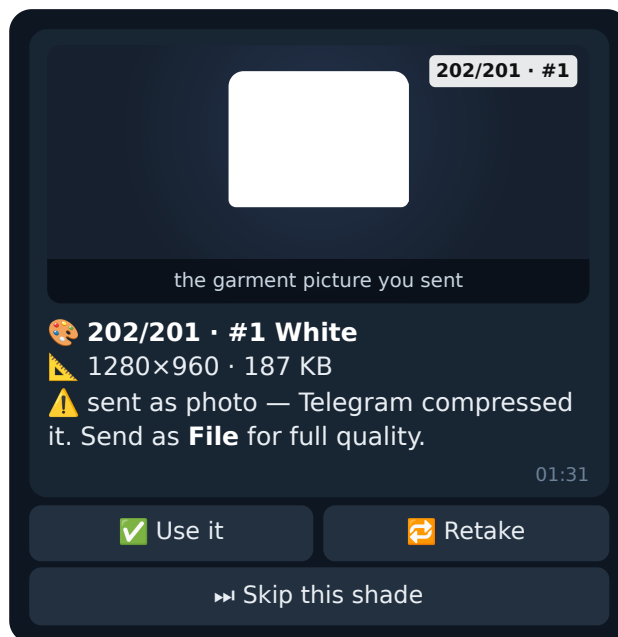

✓ **CORRECT — keep it**

The third line says **full quality (sent as file)**, and the size is big (MB).

Tap ✓ **Use it**.

⚠ **WRONG — send again**

The third line warns you, and the size is small (KB).

Tap 🔄 **Retake** and send the same picture again — this time with 📎 → **File**.

⊘ **Never send the next picture while a preview is still on the screen.** The bot treats it as a replacement for *the same colour* — the picture you were looking at is thrown away, and the new one is filed under the old colour. Always tap ✓ **Use it** (or 🔄 **Retake**) first, and wait for the bot to ask for the next colour.

After you tap ✓ **Use it**

Two things happen. The preview's buttons turn into one green label — ✓ **1 - White** — so you can see at a glance which colours are already kept.

Then the bot sends the picture back once more as a file. That is the bot **keeping the full-quality copy** — you do not need to do anything with it. Leave it in the chat.

Then the bot moves you straight to the next colour that has no picture. Keep going: **send** → ✓ **Use it** → **send** → ✓ **Use it**.

Step 6 - 7 · Repeat for every colour, then send for approval

6

The bot opens the next colour by itself

After  **Use it** the bot does **not** go back to the list. It asks for the next colour that has no picture — straight away:

Send that picture the same way ( → **File**) →  **Use it** → the next colour. Keep going.

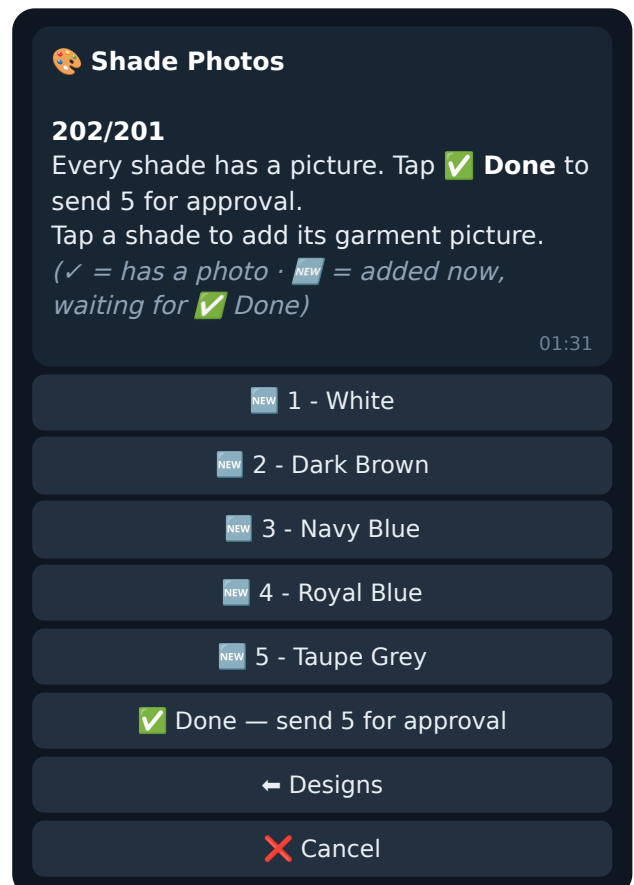

No picture for a colour today? Tap  **Skip this shade** and the bot moves on.

The colour list only comes back when **every** colour has a picture or was skipped — that is when  **Done** appears.

7 Tap **Done**

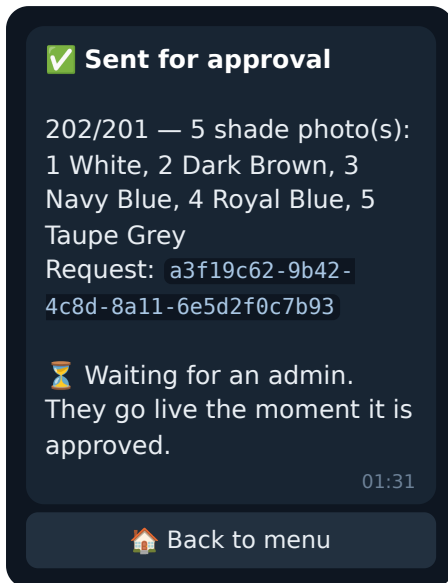

When the colours you have are all , tap  **Done** — send **N** for approval.
All of them go to the admin as **one** request.

Tap  **Done** once. One tap is enough — tapping again does not send it twice, so just wait for the confirmation.

After you tap Done · What happens next

1. You get the confirmation

Your job is finished here. The card above it still says 🕒 **Sending for approval...** and never changes — ignore it; this green one is the real answer.

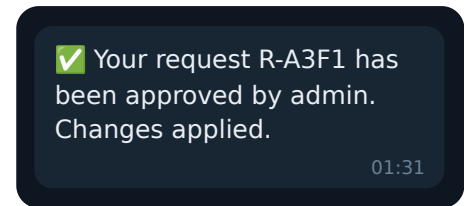

If you need to ask about it later, quote the **first four letters** of the request — the admin knows it as **R-A3F1**.

2. An admin sees your pictures

The admin sees the first picture and the list of colours, then approves. You cannot approve your own.

3. The bot tells you

When this arrives, your pictures are **live** for everybody: sales, marketers, customers.

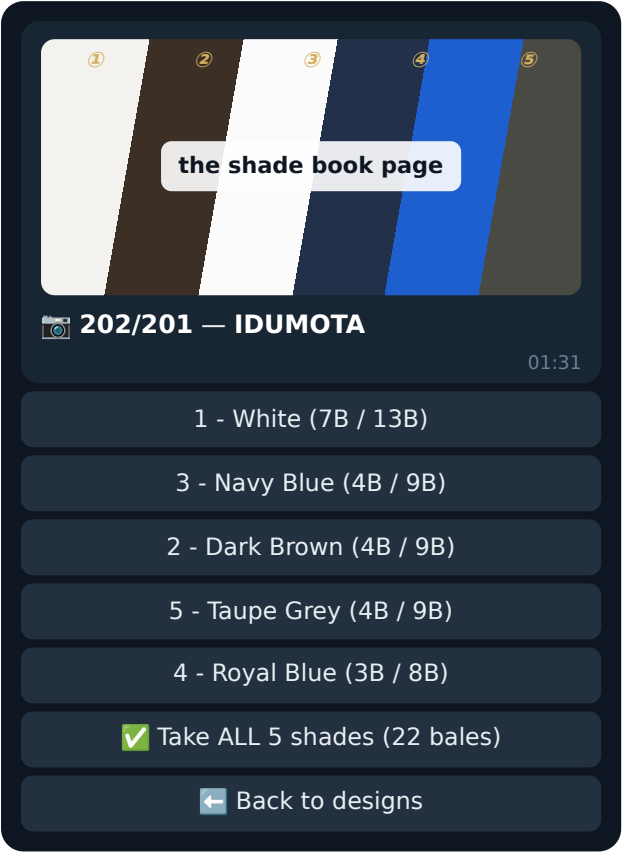

If it says ❌ **rejected**, ask the admin what was wrong and send a better picture the same way.

How long? It is live the moment an admin taps ✅ Approve. If nobody has approved by the end of the day, tell the admin — the request is waiting, nothing is lost.

Why it matters · What your picture does in the shop

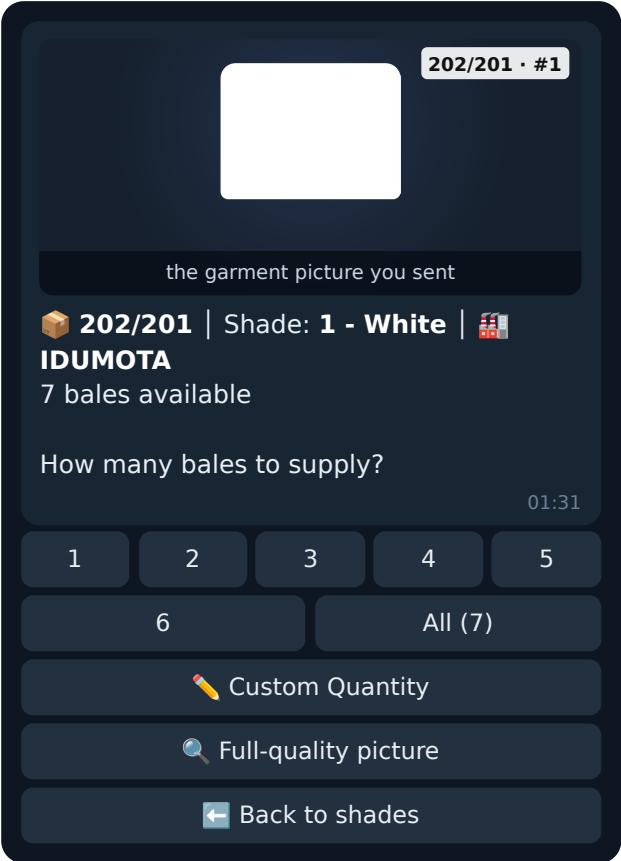

This is what a salesperson (or a marketer, or a customer) sees once your picture is approved. **The same message changes its picture** — your garment appears where the shade book was.

Before the tap — the shade book

They tap the colour they want, e.g. **1 - White**.

After the tap — your picture

Your garment picture, with the order buttons under it. 🔍 **Full-quality picture** sends it at full size with the design and colour stamped on it — nothing squeezed. That is why step 4 matters.

A blurry picture here is a lost sale. A sharp one sells the colour. That is the whole reason for 📎 → **File**.

If something goes wrong · 1 of 2 — while you are sending pictures

Nothing here can delete or change stock — the worst that happens is a picture is rejected and you send a better one.

The bot says	What it means	What you do
 Send an image file (JPG, PNG or WEBP).	You attached something that is not a picture — a PDF or a Word file.	Send the picture itself:  → File → the picture.
(the preview's buttons change to  replaced)	You sent a picture while a preview was still on screen. The bot took it as a REPLACEMENT for that same colour — the first picture is gone.	Only send a picture when the bot asks. Tap  Use it first.
 Could not download that picture (...). Telegram lets a bot fetch files up to 20 MB — send it again, or a smaller file.	The network dropped, or the file is bigger than 20 MB (the most the bot can fetch).	Send the same picture again. If it keeps failing, ask for a smaller export.
 Could not process that picture: Image is 12000×12000 (144.0 MP) — above the 40 MP limit. Export a smaller copy and send that.	The picture has too many pixels for the bot to open.	Export a smaller copy (about 4000 across is plenty) and send that.
 One picture at a time — the previous one is still being processed.	You sent a second picture while the first was still being stamped.	Wait for the preview, then decide on it.
 That picture is no longer the one being decided — use the buttons on the latest preview.	You scrolled up and tapped an old preview's buttons.	Scroll down to the newest preview and use its buttons.

If something goes wrong · 2 of 2 — before you start, and at the end

The bot says	What it means	What you do
 The Shade Photos session expired — open  Shade Photos again.	Either you did nothing for 30 minutes, or the job is already finished — after  Done and after  Cancel the old cards stop working.	Open  Shade Photos again. Anything already sent with  Done is safe.
(the bot replies about receipts, or does nothing)	You sent a picture when the bot was not asking for one.	Open  Shade Photos, tap the colour first, then send.
(your design number is not in the list)	That design has no shade-book photo in the bot yet. Shade photos hang on it.	Ask the admin to upload it first:  Upload Product Photo.
 Shade Photos — 202/201 has no shade tabs recorded. Add the shade names in  Manage Product Photos first, then come back.	The design's colour names were never entered.	Ask the admin to add the shade names first.
 Could not save the shade photos: ... /  Could not queue the approval: ...	The bot could not reach Google Sheets or Drive when you tapped  Done.	Tap  Try again. If it keeps failing, tell the admin — nothing was sent.

Golden habit: after every picture, read the third line of the preview. If it does not say  **full quality (sent as file)**, tap  **Retake** and send it again with  → **File**. Everything else on this page is rare.

✂️ 🎨 **Shade Photos — the whole job on one card**

Send every picture as a **FILE**: 📎 → **File** → picture → Send

Menu path

🛒 Sales & Marketing →
🎨 Designs → 🎨 Shade
Photos

Send a picture

📎 → **File** → picture →
Send

Preview must say

✅ full quality (sent as
file)

Buttons

✅ Use it = keep · 🔄
Retake = send again
▶ Skip = no picture
today

Marks

✓ = already has a
picture
NEW = added now, not
sent yet

Last step

✅ Done — send N for
approval
(tap once, then wait)

The loop

tap colour → send File →
✅ Use it
→ the bot opens the next
colour

Never

send a picture while a
preview
is on screen — it
replaces it

Finish in one sitting

NEW pictures are lost after
30 minutes idle or ❌
Cancel

Cannot see the tile? Ask the admin to add **shade_photos** to your department. · Something wrong?
See “If something goes wrong” on the page before.
