

Bale yards check — action list

Inventory export of 28-Sep-2026, checked against the supplier packing list · prepared 29-Sep-2026 ·
tick each action when it is done

597 of 600

March bales match the supplier packing list than for than

1 bale

to count now — 6438, where 60 yd may not exist

52 bales

from July to measure: 210 thans, 5,785 yd on the sheet

R-9BF6

finished and booked once — only its payment needs a look

Actions

☐ A1 Count bale 6438 in Lagos

Store · Lagos

Design 16040, all five thans on the shelf. The sheet holds 5 thans — $14 \cdot 26 \cdot 30 \cdot 30 \cdot 30 = 130 \text{ yd}$ (Inventory rows 4022–4026). The supplier packing list holds 3 thans — $14 \cdot 26 \cdot 30 = 70 \text{ yd}$, and its net weight of 19.2 kg fits 70 yd. Thans 4 and 5 (rows 4025 and 4026, 30 yd each) may not exist: **60 yd** of stock that could be on paper only.

Done when — The bale is opened, its thans counted and measured, and the result written on this page.

☐ A2 Rule how a than that does not exist comes off the sheet

Owner, then agent

If A1 finds 3 thans, rows 4025 and 4026 must go.  Edit Bale can change a than or add one; removing a than was deferred when Edit Bale shipped (02-Sep-2026). The sheet is never edited by hand. Two ways: a **remove-thans step inside Edit Bale**, label photo and two admins as for every edit (recommended), or a one-off guarded script with a dry run.

Done when — The chosen door is built and the two rows are corrected through it; Lagos stock of 16040 falls by 60 yd.

☐ A3 Measure the 52 July bales in Appendix A

Store · IDUMOTA, Kano office

The July container has no packing list in the workbook. These 52 bales still have stock on the shelf and are not the usual 5 thans $\times$ 30 yd: **210 thans, 5,785 yd** on the sheet — 195 thans in IDUMOTA, 15 in Kano office. Appendix A lists each one with room to write the count and the measured yards. Measure only the thans still on the shelf.

Done when — Appendix A is filled in and sent back; every difference is corrected through  Edit Bale (two admins).

☐ A4 Get the supplier packing list for the July container

Owner

Without it, 542 standard July bales ($5 \times 30 \text{ yd}$) cannot be checked at all. The container carries indents SA/2521, SA/2522, SA/1328 and SA/1326 across 16 designs.

Done when — The packing list is shared and the same than-by-thans check runs on all 646 July bales.

☐ A5 Confirm what Ayubal Ansari paid on R-9BF6

Owner

The sale is 3,712,500 (990 yd). The payment recorded with it is **3,750** — the same figure as the rate per yard (Ledger_Entries rows 192–193). Confirm the amount actually received.

Done when — If more was paid, the balance is recorded through  and his statement shows the true amount owed.

- ☐ **A6 Rule on bank payments landing in the Cash account**

Owner, then agent

The same 3,750 was posted to **Cash** although its mode was "Paid to Zenith". The bot books a payment as bank only when the mode contains the word "bank", so every "Paid to <bank>" payment lands in Cash. The fix is a small change in the accounting service, plus moving the entries already posted.

Done when — Bank-mode payments post to the bank account, and R-9BF6’s 3,750 is moved to it.
- ☐ **A7 Check the last than of bale 6256 sold to ABBA**

Owner

Design 9032, all sold to ABBA. Than 5 is on the sheet as **28 yd** (row 3751, sold 03-Sep-2026); the packing list says 30. Nothing is left on the shelf.

Done when — If ABBA received 30 yd, the 2 yd missing from that sale is billed; otherwise nothing to do.
- ☐ **A8 Retire the “Sheet62” copy of the March packing list**

Owner

It swaps the totals of bales 6431 and 6438 and is missing bale 6391. The “CNTR CJE FEB 2026” copy is consistent with its own weights and is the one to trust.

Done when — Sheet62 is marked superseded or deleted, so nobody checks a bale against it.
- ☐ **A9 Trim the 4-Sep oversize list to the July thans**

Agent · Owner

List A of docs/ISC-1_ROW_LISTS_2026-09-04.md sends 64 thans of 40 yd or more to  Edit Bale. The **35 March long thans all match the supplier packing list**: they are real long pieces, not typing errors. Only the 26 July ones stay unverified — Appendix B; the 9 still on the shelf are measured in A3.

Done when — List A holds the July thans only, each settled by a measurement.

March container against the supplier packing list

600 March bales are on the sheet. 597 match the packing list in the “CNTR CJE FEB 2026” tab than for than; these three differ.

BALE	DESIGN	WHERE · STATUS	ON THE SHEET	ON THE PACKING LIST	FINDING
6438	16040	Lagos 5 on the shelf	5 thans · 130 yd 14 · 26 · 30 · 30 · 30 rows 4022–4026	3 thans · 70 yd 14 · 26 · 30	Two thans on the sheet are not on the packing list — A1, A2.
6256	9032	Kano office 5 sold to ABBA	5 thans · 148 yd 30 · 30 · 30 · 30 · 28 rows 3109–3117, 3751	5 thans · 150 yd 30 · 30 · 30 · 30 · 30	Than 5 recorded 2 yd short — A7.
6294	9031-C	Kano office 5 on the shelf, 1 sold	6 thans · 185 yd 30 · 30 · 44 · 16 · 35 · 30 rows 2691, 3807–3810, 6155	5 thans · 185 yd 60 · 30 · 44 · 16 · 35	Totals agree: the 60-yd than is held as two 30s (than 6 added by Edit Bale on 23-Sep). No action.

The 35 March thans of 40 yd or more (22 sold, 13 on the shelf) all match the packing list — genuine long pieces. The workbook holds a second copy of this packing list (“Sheet62”) with the totals of bales 6431 and 6438 swapped and bale 6391 missing; by the “CNTR CJE FEB 2026” copy both 6431 and 6391 are correct on the sheet.

R-9BF6 — Ayubal Ansari, 25-Sep-2026: confirmed complete

Request	approved 28-Sep-2026 15:11 (ApprovalQueue row 542)
Stock	the 27 thans of the failed first run put back (BaleMovements kind “restart”), then all 33 sold in one pass, dated 25-Sep
Transactions	one row: 990 yd, 33 thans (row 314)
Ledger debits	9006 · 337,500 · 9037-D · 2,700,000 · 9037-E · 675,000 (rows 189–191)
Invoice	INV-2026-0077 for 3,712,500
Payment	3,750 posted to Cash — see A5 and A6

Appendix A — July bales to measure (action A3)

Not the usual 5 thans × 30 yd, stock still on the shelf. **Measure only the thans on the shelf**; the yards column is what the sheet says those thans hold. Write the count and the measured total in the last two columns.

How this was checked: every Inventory row of the 28-Sep export was grouped into bales (design · bale number · container). March bales were compared than by than with the supplier packing list in the “CNTR CJE FEB 2026” tab; July bales, which have no packing list in the workbook, were compared with the usual 5 thans × 30 yd. Row numbers are the Inventory sheet rows on 28-Sep; the sheet may have moved since, so find each bale by its number before correcting it. Source: scripts/build-bale-yards-check.py.
