

PAY-2 — Payment request lifecycle: cards and flow

Every card as it prints in Telegram today, with the owner's 09-Sep lifecycle drawn over it — reason line, finance seat, "Paid" reflected back to everyone who approved.

09-Sep-2026 · drawn from a verified read of `telegram-ops-bot` at that date · worked example: **Abdul** asks for **₦4,000** into **OPAY 7048940378**, reason "**Transport to Idumota**"; admins **Ajeet** and **John**; finance = the **Office phone**.

■ Dark card / plain row = **today** (verified in code, file:line given)

▤ Yellow line or dashed box **NEW** = **PROPOSED** — does not exist yet

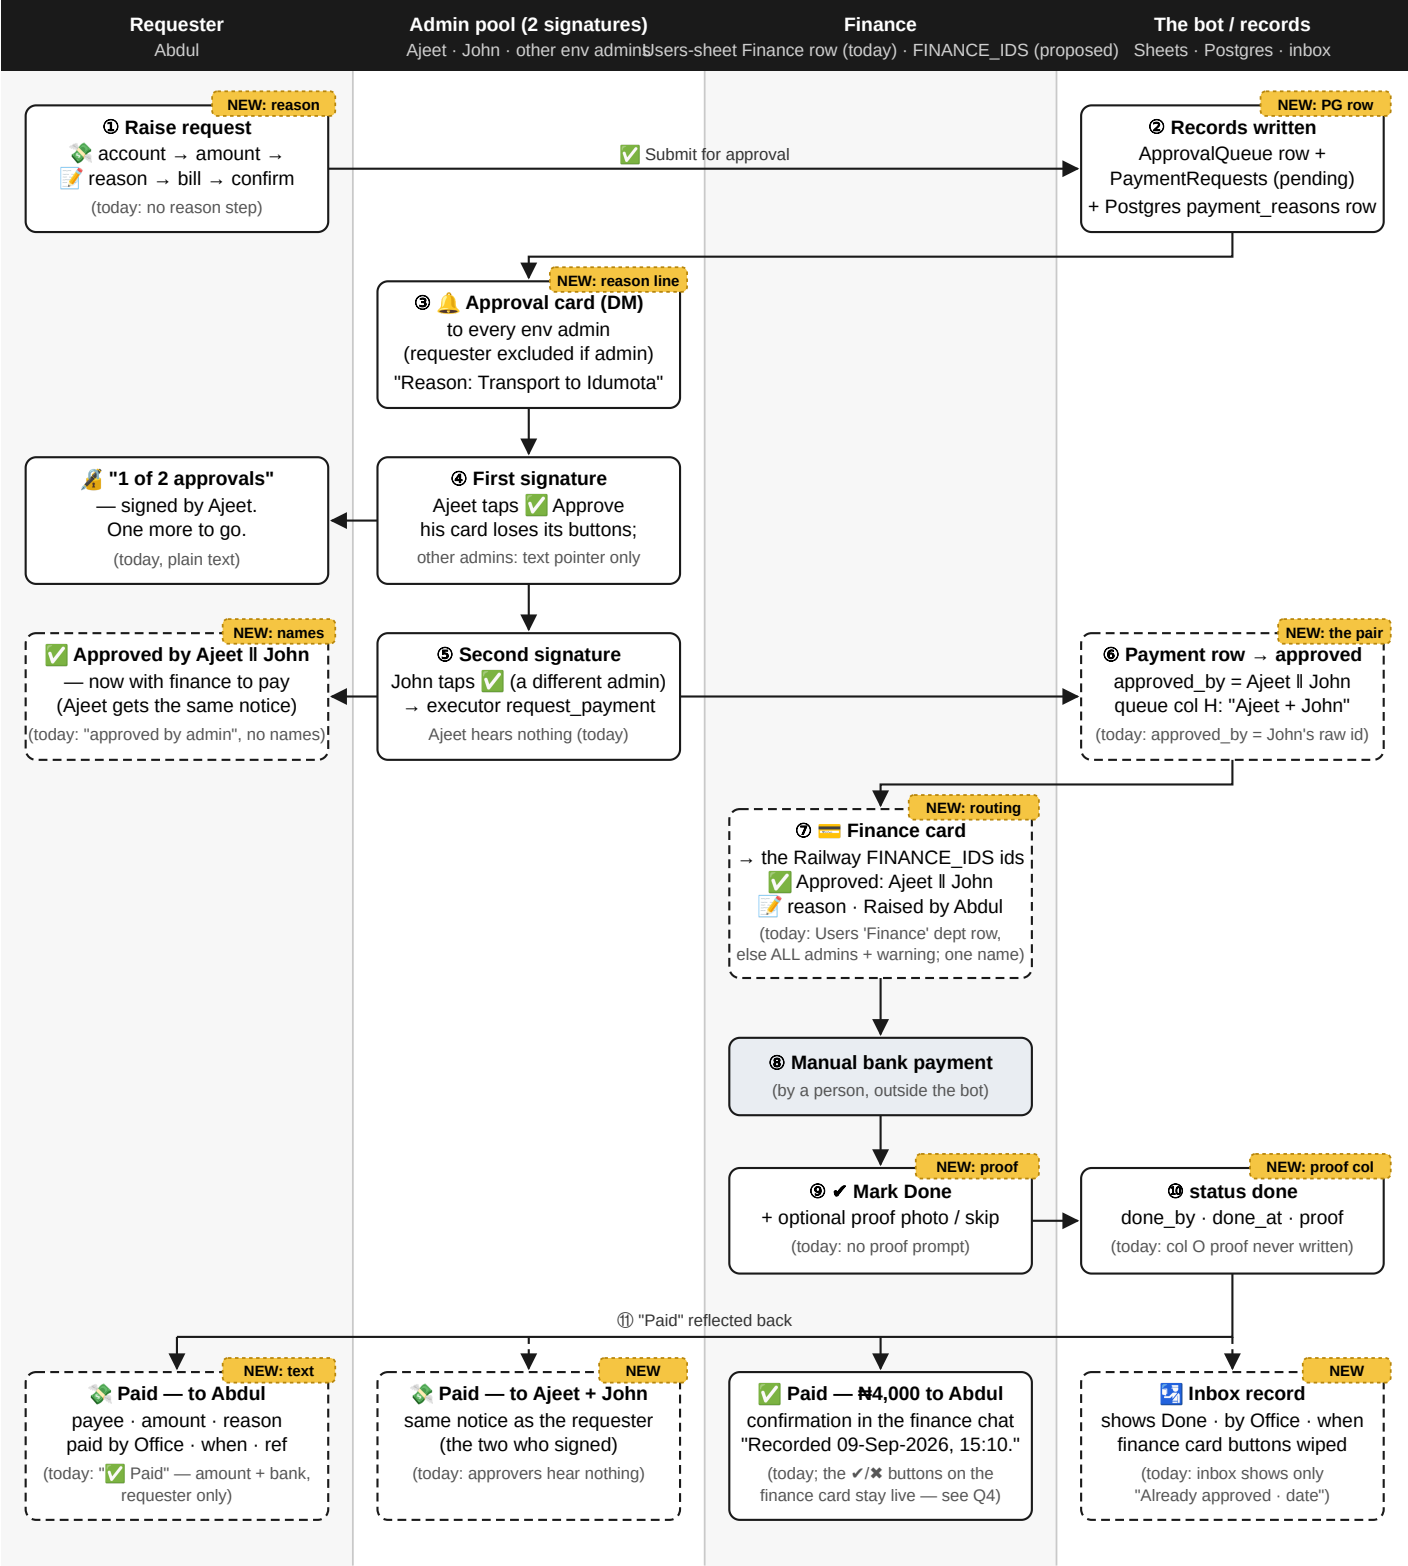

---- Dashed arrow = **proposed** delivery (a solid arrow into a dashed box = a message that exists today, with proposed wording)

The owner's lifecycle, in one line: admin pool receives the request → approved → a detailed card naming the approvers reaches the finance account (the Railway finance ID) → finance opens the bank app and pays by hand → finance marks it done → "done" is reflected back to everyone who was in the approval queue. Every request now carries a typed **reason** (3–120 chars, after the amount; chips and an index later; stored in Postgres — `specs/PAY-2_PAYMENT_REASON.md`).

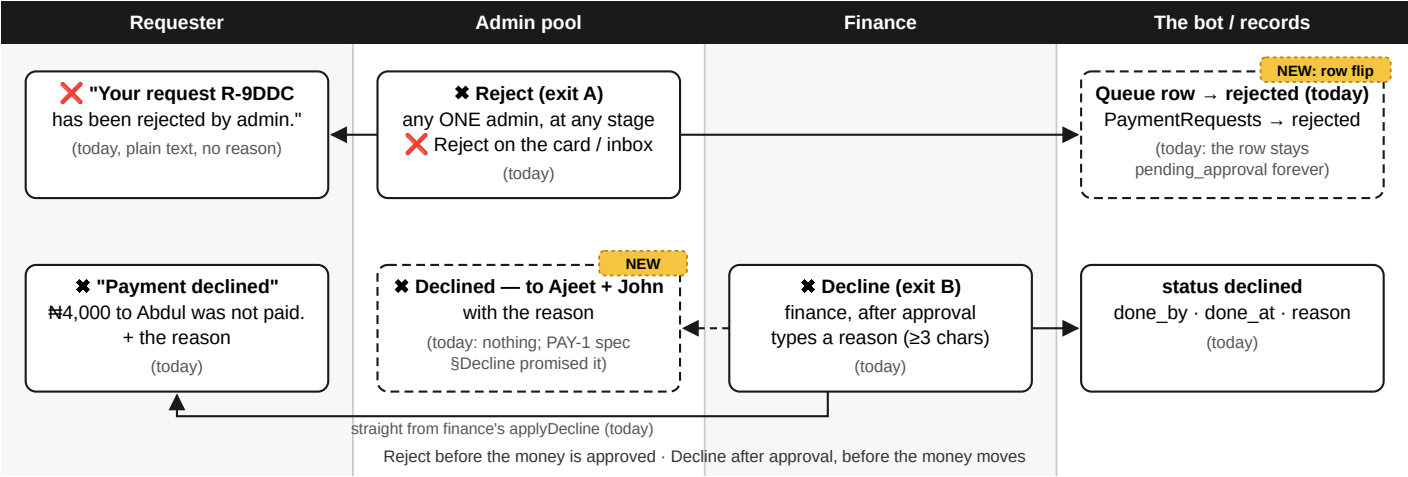

Known fact to rule on: today the finance card is routed by `paymentService.financeHead()` = the single Users-sheet row whose `department` is **Finance** (if there is none, or more than one, it goes to **all env admins** with a warning line). The Railway variable `FINANCE_IDS` (`config.access.financeIds`, FIN-V1) is used **only for read-only gates** (balance, container values, Payouts/Incentives, Manage Users summary) and never for the payment card — so the finance ID the owner marked in Railway does **not** receive it today. See Q1.

1 · The flowchart

Four lanes. Boxes with a dashed border and a **NEW** pill are proposed; the "(today: ...)" line inside a box states what happens now. Read top to bottom.

The two exits

2 · The cards, in lifecycle order

Each bubble is the exact text Telegram shows (bold and italic as rendered; `code` spans as rendered). Buttons are drawn as chips with their callback under them. Yellow lines carry a **NEW** pill — they are PROPOSED and do not print today. Everything else is verified against the file:line in the grey line under each title.

1 The reason step whole card PROPOSED

To: **Abdul** (requester) · when: right after a valid amount, before the bill step · today the bot goes straight from the amount to the " Any paperwork?" bill card (`paymentFlow.js:326-334`). Proposed step name `req_reason` (spec §2).

 **Abdul** NEW

 OPAY 7048940378 · ₦4,000

 **What is this payment for?**

Type a short reason — e.g. transport to Idumota, loading at the warehouse.

 Back
pay:back

 Cancel
pay:cancel

Abdul types **Transport to Idumota**. Anything shorter than 3 or longer than 120 characters re-renders the same card with one line on top:

 Give a reason of 3 to 120 characters. No skip chip — the owner's rule is that every payment **must** be tagged.

2 **Confirm card** today + one new line

To: **Abdul** · when: after the bill is sent or skipped (`pay:bill:skip`) → `showRequestConfirm` (`src/flows/paymentFlow.js:336-351`; `₦` via `money.expense`, `paymentService.js:44-47`). The  badge suffix prints only when the amount is $\geq$ Settings `PAYMENT_THRESHOLD_NGN` (default 50,000) — not for ₦4,000.

 **Send this for approval?**

 Abdul · employee

3 Requester receipt — " ⏰ Sent for approval" today

To: **Abdul**, edited in place on the flow card, session cleared · when: `pay:submit` → `submitRequest` appends the `PaymentRequests` row (status `pending_approval`, `bill_file_id`), the `ApprovalQueue` row (action `request_payment`), `AuditLog` `approval_queued`, then DMs the admins (`paymentFlow.js:353-415`; receipt :406-410). **Proposed:** the same submit also writes the `Postgres` `payment_reasons` row (fail-open) and the `reason` key on the `ActionJSON` **NEW** .

⏰ Sent for approval

₦4,000 → Abdul
PAY-20260909-3F9A2C1E

Two admins sign, then finance pays and marks it done.

🏠 Back to menu
act: __back__

On a failure the card reads ⚠️ Could not submit: <error> with the same button.

4 Admin approval card (DM) today + Reason line

To: **Ajeet, John** and every other id in env `ADMIN_IDS` (`config.access.adminIds`; sheet-promoted admins get no DM and must use the 📧 inbox); an admin requester is excluded from his own card (`paymentFlow.js:403`) · when: immediately at submit (`paymentFlow.js:395-404` → `approvalEvents.notifyAdminsApprovalRequest` :1657-1736; body `paymentCards.buildApprovalSummary` :63-72; risk sentence `risk/evaluate.js:275-284`). Sent as `MarkdownV2` with a plain-text fallback of the same core lines (no duplicate flag, no reminder prefix — :1718). **The bill is NOT forwarded with this card** — admins read "Bill: attached" without the file (finance does get it, card 7).

🔔 Approval required

Ref: 9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84
From: Abdul

Payment request: ₦4,000
Payee: Abdul (employee)
Account: 7048940378 · OPAY

Reason: Transport to Idumota **NEW**

⚠️ LARGE PAYMENT — above the threshold ← only when ≥ ₦50,000
Bill: attached ← only when a bill was sent

All request payment operations require two-admin approval.

Use buttons below to approve or reject.

✅ Approve
approve:9ddc4b7e-...

❌ Reject
reject:9ddc4b7e-...

Variants seen today: a first line ⚠️ **Possible duplicate** — same request also pending as xxxxxxxx... — when an identical request was queued minutes earlier; the ⌚ **Reminder** — **this approval is still waiting** re-send every `REMINDER_HOURS_ADMIN` / `APPROVAL_REMINDER_HOURS` hours (Settings; default 6; 0 = off — `reminderPolicy.js:36-42`, `approvalReminder.js:73-78`, :98-112; only while the queue row is pending, ≥10 min old; never for an approved-but-unpaid payment) — rebuilt from the `ActionJSON`, so it carries **no Bill line**; the 📧 inbox copy under ? **Other** (payments are in no inbox category, `approvalsInboxFlow.js:78-93`) with buttons `abx:ok` / `abx:no` — the **bare three-line summary** only (no 🔔 header, Ref, From or risk sentence) plus a *Requested by Abdul · today · R-9DDC* footer while pending (:838); the Bill line does not ride the `ActionJSON` (`paymentFlow.js:376-388`), so it never prints on the inbox or reminder copies. The Reason line rides all three automatically because the inbox and the reminder rebuild the card from the queue row's `ActionJSON`.

5 First signature — Ajeet taps (DUAL-1) today

When: the first  Approve on an employee-raised request while ≥ 2 other admins exist (`risk/evaluate.js:242-247` ; `approvalEvents.js:1846-1934`). An admin requester counts as the first signature himself, so one other tap goes straight to card 6. Only Ajeet's own card loses its buttons; John's card is **not** edited (no signer name on it) and no fresh card is sent.

(a) **Ajeet** — toast on the tap, then a DM:

 Approval 1 of 2 recorded.

 Request 9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84: your approval is recorded (1 of 2). Waiting for a second admin.

(b) **Abdul** — plain-text DM:

 Your request (9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84) has 1 of 2 admin approvals — signed by Ajeet. One more to go.

(c) **John** and every other env admin (minus signer, minus requester) — text pointer only, their card untouched:

 Request 9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84 (request payment) has its first admin approval and needs a SECOND. Use the approval card in your chat.

Guards (alerts, no message): Ajeet taps again →  You already gave the first approval — a different admin must give the second. · Abdul taps his own card →  You cannot approve your own request — a second admin must review it.

6 Final approval — John taps today + proposed wording

When: the second  → `inventoryService.executeApprovedAction` branch `request_payment` (:1613-1626) sets PaymentRequests status `approved` , `approved_by` = John's raw id only (:1623); ApprovalQueue Status `approved`, Approver col H "Ajeet + John" (`approverStamp.js:85-101`); AuditLog `approval_approved` . Messages: `approvalEvents.js:2006-2021` . John's card loses its buttons; other admins' cards stay live — a later tap toasts "Already approved — nothing to do.", wipes that card's buttons and sends  `Request <id> was already approved on <date> — no change made.` into that admin's chat (`approvalEvents.js:1759-1771`).

(a) **John** (deciding admin) — toast `Approving...` then:

 Request 9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84 approved by Ajeet + John. Changes applied.

(b) **Abdul** — today, plain text (no amount, no names, no hint it is now with finance):

 Your request R-9DDC has been approved by admin. Changes applied.

(b') **Abdul** — PROPOSED replacement (the executor already builds a "now with finance to pay" line at `inventoryService.js:1625` that is never delivered):

 Approved by Ajeet II John NEW

₦4,000 → Abdul · OPAY 7048940378

 Transport to Idumota

PAY-20260909-3F9A2C1E

Now with finance to pay. You will be told when it is paid.

(c) **Ajeet** (first signer) — today: **nothing**. PROPOSED: the same notice as (b') so he knows the request he signed is closed and with finance.

Failure path today: John gets  Approved but execution failed: <message>; Abdul gets  Your request (...) was approved but could not be completed. Admin has been notified. Please follow up.

7 Finance card today + proposed routing, pair, reason, name

To (today): `paymentService.paymentRecipients()` (:125-129) = the ONE active Users row whose department includes **Finance** (`financeHead` :63-90); zero or 2+ such rows, or Users unreadable → every id in env `ADMIN_IDS`, each copy carrying a warning line. **Railway FINANCE_IDS is not consulted.** Proposed: every id in `FINANCE_IDS` first (the Office phone); else the Users Finance row; else all admins + warning **NEW**. When: fire-and-forget right after card 6 succeeds (`approvalEvents.js:2080-2086` → `paymentCards.sendFinanceCard` :115-149; text `buildFinanceCard` :29-48). Sent as the bill photo/document's **caption** when a bill exists, else as text.

 **Payment** — Abdul · employee
 7048940378 · OPAY
 ₦4,000 (+ "⚠️ large payment" when ≥ ₦50,000)
 Transport to Idumota **NEW**
 Bill attached ← only when a bill was sent
 Approved: Ajeet II John **NEW** ← today: "✅ Approved: John" (final tapper only)
 Raised by Abdul · 09-Sep-2026, 14:32 **NEW** ← today: the raw Telegram id, not the name
`PAY-20260909-3F9A2C1E`

 **Mark Done**
pay:done:PAY-20260909-3F9A2C1E

 **Decline**
pay:dec:PAY-20260909-3F9A2C1E

Fallback line appended today when no single finance person is found (one of): ⚠️ No one is in the Finance department yet — this is with all admins until the Users sheet names exactly one finance person. / ⚠️ <n> people are in the Finance department. One finance ID makes payments — fix the Users sheet; meanwhile this is with all admins. / ⚠️ The Users sheet could not be read, so the finance person is unknown — this is with all admins. The buttons are session-free and are **never wiped** after a decision today.

8 Mark Done — the finance confirmation and the proof prompt today + proposed proof step

Who may tap (today): `paymentService.canExecute` (:112-122) — the finance head when the sheet names exactly one, else any env `ADMIN_IDS` id; `FINANCE_IDS` holders and sheet-promoted admins are refused ("Only the finance person marks a payment done."). Proposed: honoured from any id the card was sent to (Q1) **NEW**. When: `pay:done:<PAY id>` → `markDone` (`paymentFlow.js:445-470`): row → status `done`, `done_by`, `done_at` (Lagos wall-clock); `AuditLog payment_done`. Column O `proof_file_id` is never written — there is no proof prompt today (file header :36 mentions `pay:proof:skip`; `handleFile` :604 accepts files only at the bill step).

(a) PROPOSED — **Office phone**, right after the tap. The row is written first (as today), then this prompt is offered, so a slow photo never blocks the record:

 **Proof of transfer?** **NEW**
Send a screenshot of the bank transfer, or skip.
₦4,000 → Abdul · PAY-20260909-3F9A2C1E

➡ Skip — no proof
pay:proof:skip

(b) **Office phone** — today's fresh confirmation in the finance chat (the original finance card keeps its live ✓/✗ buttons; a second tap only toasts "Already marked done."):

Marked done.

 **Paid** — ₦4,000 to Abdul
`PAY-20260909-3F9A2C1E`
Recorded 09-Sep-2026, 15:10.
 Proof attached **NEW** ← only when a proof was sent

Other toasts today: *That payment was not found.* · *That payment is pending approval — it cannot be paid.* Proposed: after Done the finance card's own keyboard is wiped and, in the all-admins fallback, every other copy too **NEW** (today they stay live forever).

9 **"Paid" — reflected to the requester and both approvers** PROPOSED text (replaces today's requester-only DM)

Today: `markDone` DMs **only Abdul** (`paymentFlow.js:464-465` via `notifyRaiser :525-530`, Markdown with unescaped payee/bank — a name with `_ * ` [` makes Telegram reject the send and Abdul is silently not told). Ajeet, John, the other admins, the admin cards and the inbox hear **nothing**. The owner's "reflected back to all the people who were there in the approval queue" does not exist. Proposed audience: **Abdul + Ajeet + John** (the requester and the two who signed — Q2); one message, plain text or escaped Markdown so no name can break it.

Today — **Abdul** only:

✓ **Paid**

₦4,000 was sent to OPAY 7048940378.

PROPOSED — **Abdul, Ajeet** and **John**, the same text to each:

 **Paid — ₦4,000 to Abdul** NEW

 OPAY 7048940378

 Transport to Idumota

✓ Approved by Ajeet & John

 Paid by Office · 09-Sep-2026, 15:10

 Proof attached ← only when finance sent one (Q3: attach the photo itself?)

PAY-20260909-3F9A2C1E · R-9DDC

Suggested one-line difference per reader: Abdul's copy is exactly the above; the approvers' copy adds a first line *The payment you approved is done.* so it reads as a closure of their own signature, not a stray receipt.

10 **Inbox record after Done** today + proposed lines

Today (`approvalsInboxFlow.js:722-847`; resolved view `:737-745`): the resolved card re-reads the ApprovalQueue row live and prints the bare three-line summary (`approvalCards.js:912-913` → `paymentCards.buildApprovalSummary`; no  header, Ref, From, risk sentence or "Requested by" footer — those belong to the DM card and the pending inbox render only) plus  *Already approved · date*. It never reads PaymentRequests, so it cannot tell "approved, unpaid" from "paid" or "declined" today. Proposed: for request_payment the resolved view also reads the PaymentRequests row and adds one status line (Q4) NEW.

Payment request: ₦4,000
Payee: Abdul (employee)
Account: 7048940378 · OPAY
Reason: Transport to Idumota NEW

✓ *Already approved · 09-Sep-2026 — no action needed.*

 **Paid by Office · 09-Sep-2026, 15:10 · PAY-20260909-3F9A2C1E**

NEW or:  With finance to pay · ✕ Declined by Office · reason

← Back to list
abx:back

✕ Close
abx:close

List chip today:  09 Sept · request payment · Abdul (day-space-month, en-GB short month — `approvalsInboxFlow.js:160-167, :683`) under the  **Other** category (no dual-admin  badge, no  bill chip). Proposed: a 
Payments category of its own, with the  dual badge NEW.

11 ✖ Exit A — an admin rejects today + proposed row flip

When: ✖ Reject on card 4 (DM, reminder or inbox) by any one admin at any stage (`approvalEvents.js:2103-2120`). Today `inventoryService.rejectApproval ( :1849-1906 )` has no `request_payment` branch: only the `ApprovalQueue` row flips to rejected; the `PaymentRequests` row stays **pending_approval** forever, so 📄 My requests keeps showing "⌚ waiting for approval". The tapped card's buttons are wiped; no reason is asked.

(a) The rejecting admin — toast `Rejecting...` then:

✖ Request 9ddc4b7e-2f1a-4c58-9e0b-7a1d3c5f2b84 rejected.

(b) **Abdul** — plain text:

✖ Your request R-9DDC has been rejected by admin.

(c) PROPOSED — the record and the list:

📄 **My requests** NEW

✖ ₦4,000 — rejected · 📄✎ Transport to Idumota

09-Sep-26

The line above needs the `PaymentRequests` row flipped to `rejected` at reject time (one branch in `rejectApproval`); the word "rejected" already exists in `STATUS_WORD` (`paymentFlow.js:422`) but is unreachable today. Failure today: ⚠ *Rejection failed: <message>*.

12 ✖ Exit B — finance declines today + proposed approver notice

When: `pay:dec:<PAY id>` → `startDecline (paymentFlow.js:472-491)` → typed reason (≥3 chars, cut at 200; `:589-593`) → `applyDecline (:493-510):row` → status `declined`, `done_by`, `done_at`, `decline_reason`; AuditLog `payment_declined`.
Same gate as Mark Done. Today only **Abdul** and the taper's own card are told; PAY-1 spec `$Decline` promised "requester + both approvers DM'd with the reason" — not built.

(a) **Office phone** — the prompt (the flow card, edited):

✖ Decline ₦4,000 to Abdul

Why? The person who asked will see this, so say what would make it payable.

 Cancel
`pay:cancel`

Too short →  Give a reason — the requester needs to know what to fix. Office types: **Account name does not match — send the OPAY name.**

(b) **Office phone** — the card edited in place:

✖ Declined — ₦4,000 to Abdul

Account name does not match — send the OPAY name.

The requester has been told.

-  ₦9,000 — declined by finance ·  Fuel NEW
02-Sep-26 · Account name does not match

...and 3 older.

 [Back to menu](#)
act:__back__

3 · Routing table — who receives what

Yellow cells are proposed. "env admins" = the ids in Railway `ADMIN_IDS` ; sheet-promoted admins are never DM'd today and see payments only through the  inbox.

Step	Who receives (today)	Today — file:line	Proposed change
Reason step	—	Does not exist. Wizard goes amount → bill (<code>paymentFlow.js:315-334</code>).	New step <code>req_reason</code> after the amount: 3–120 chars, no skip. Reason on the ActionJSON, on the three cards, on My requests; Postgres <code>payment_reasons</code> row at submit (migration 002), optional mirror column S on PaymentRequests (spec Q1).
Submit → admin card (4)	Every env admin minus an admin requester	<code>paymentFlow.js:395-404</code> → <code>approvalEvents.js:1700-1729</code> ; duplicate flag on top. Bill not forwarded (<code>sale_doc_file_id: undefined</code>).	Add the <code>Reason:</code> line. Forward the bill with the card, as sale docs are (Q5).
Reminder	Same set, every <code>REMINDER_HOURS_ADMIN</code> / <code>APPROVAL_REMINDER_HOURS</code> hours (Settings; default 6; 0 = off) while the queue row is pending	<code>approvalReminder.js:80-112</code> ; an approved-but-unpaid payment is never reminded.	Unchanged for approval. A separate "waiting for finance" reminder to the finance seat after N hours (Q5).
First signature (5)	Signer (toast + DM); requester (DM with signer's name); every other env admin (text pointer, card untouched)	<code>approvalEvents.js:1897-1930</code>	Unchanged.
Final approval (6)	Deciding admin ("approved by A + B"); requester (generic). First signer: nothing.	<code>approvalEvents.js:2020-2021</code> ; <code>PaymentRequests.approved_by</code> = final tapper's raw id (<code>inventoryService.js:1623</code>); pair only in ApprovalQueue col H (<code>approverStamp.js:85-101</code>).	Requester and BOTH approvers get the named notice (card 6 b'); <code>approved_by</code> stores "Ajeet John" (the header at <code>paymentRequestsRepository.js:23</code> already documents that shape).
Finance card (7)	The ONE active Users row in department Finance; else ALL env admins + warning	<code>paymentCards.js:121</code> → <code>paymentService.js:125-129</code> (<code>financeHead</code> :63-90). <code>FINANCE_IDS</code> never consulted.	Recommended rule: the card goes to every id in Railway <code>FINANCE_IDS</code> ; if that is empty, the Users 'Finance' department row; if both are empty, all admins with the warning line. Card names both approvers, the reason, and the requester by name.
Who may Mark Done / Decline	Finance head when the sheet names one; else any env admin. <code>FINANCE_IDS</code> holders refused.	<code>paymentService.js:112-122</code> ; <code>paymentFlow.js:446-449, 473-476</code>	Honoured from any id the card was sent to under the rule above (so the Railway finance ID can mark done).
Mark Done (8, 9)	Requester only (DM); fresh confirmation in the tapper's chat. Approvers, other admins, original cards: nothing.	<code>paymentFlow.js:459-469</code> (<code>notifyRaiser</code> :525-530); proof col O never written.	Optional proof prompt (<code>pay:proof:skip</code>) writing col O; the  Paid notice to requester + both approvers; finance card keyboard(s) wiped; inbox record shows Done.
Decline (12)	Requester only; tapper's card edited	<code>paymentFlow.js:504-509</code>	Both approvers DM'd with the reason (as PAY-1 spec §Decline promised); finance card keyboard(s) wiped.

Step	Who receives (today)	Today — file:line	Proposed change
Reject (11)	Rejecting admin + requester	<code>approvalEvents.js:2116-2117</code> ; PaymentRequests row untouched (<code>rejectApproval</code> has no payment branch).	Flip the PaymentRequests row to <code>rejected</code> so My requests stops saying "waiting".
Where <code>FINANCE_IDS</code> is used today	Read-only gates only	Typed <code>check_balance</code> (<code>telegramController.js:4809</code>), container values (<code>:6044</code>), Payouts/Incentives visibility (<code>taskFlow.js:135</code> , <code>:3113</code> ; <code>incentivesRepository.js:6</code>); Manage Users summary (<code>userManagerFlow.js:62</code>). Defaults to <code>ADMIN_IDS</code> when blank (<code>config/index.js:73</code> , <code>:293-295</code>).	Becomes the first source of the finance seat for the card and for Mark Done / Decline.
Sheet row lifecycle (PaymentRequests A–R)	—	append <code>pending_approval</code> + bill (<code>paymentFlow.js:359-372</code>) → <code>approved</code> + one id (<code>inventoryService.js:1623</code>) → <code>done</code> + <code>done_by/done_at</code> (<code>paymentFlow.js:459-461</code>) <code>declined</code> + <code>reason</code> (<code>:497-500</code>). Never written: <code>proof</code> (O), <code>rejected</code> , a two-name <code>approved_by</code> .	All three gaps written; new trailing column <code>S reason</code> (mirror of the Postgres row) if the owner takes spec Q1.

4 · Questions for the owner

One line each; the recommended answer comes first.

- Q1 — Finance recipient rule.** Recommended: the card goes to every id in Railway `FINANCE_IDS`; if that is empty, the Users 'Finance' department row; if both are empty, all admins with the warning line — and ✓ Mark Done / ✗ Decline are honoured from any of those ids. Alternative: keep the Users sheet as the only source and add `Finance` to the Office phone's department cell yourself (the two mechanisms are unrelated today).
- Q2 — "Reflected back to all".** Recommended: the 🟢 Paid / ✗ Declined notice goes to the requester + the two admins who signed (Ajeet and John) only; every other admin sees the outcome in the 📧 inbox record. Alternative: every admin in the pool gets the notice too (more noise on every payment).
- Q3 — Proof on the Paid notice.** Recommended: yes — when finance attached a transfer screenshot, the Paid notice is sent as that photo with the text as caption (requester and approvers); without proof, plain text. Alternative: text only, proof kept on the row for the record.
- Q4 — Inbox record after Done.** Recommended: yes — the resolved inbox view for a payment reads the PaymentRequests row and adds one line: 🟢 Paid by Office · when · PAY-... / 📧 With finance to pay / ✗ Declined by Office · reason; and the finance card's buttons are wiped once Done or Declined. Alternative: leave the inbox at "Already approved" and rely on the DMs.
- Q5 — Bill on the admin card.** Recommended: forward the bill photo/PDF with the admin approval card and give the inbox card a 📄 chip, as sale documents already have; today admins read "Bill: attached" without the file (only finance gets it).
- Q6 — Reject flips the row.** Recommended: an admin Reject also flips the PaymentRequests row to `rejected` (today it stays `pending_approval` forever and My requests keeps saying "waiting"); and Reject asks a one-line reason like Decline does. Alternative: flip only, no reason.
- Q7 — Finance reminder and queue.** Recommended: an approved-but-unpaid payment re-sends the finance card after `PAYMENT_FINANCE_REMINDER_HOURS` (Settings, default 4) and the Payments hub gains a 🟡 "Waiting for me to pay" list for the finance seat (`awaitingPayment()` exists with no caller); today a missed finance card is never re-sent.

8. **Q8 — Small fixes to ride along.** Recommended: escape or send plain the Paid / Declined DMs (a payee or bank name with `_ * ` [` silently loses the message today); store `approved_by` as the pair; show the requester's name, not the raw id, on the finance card; put payments in their own  inbox category with the dual-admin badge. Say if any of these should wait.
